Goal Set Track

System Scope:

Goal set track is a system which interacts with users who have registered, and help them to complete their personal goals through reminders. The system provides an interface where the user can load his personal information and personal goals. This information is private and only the user can view, modify or delete it.

The user can find their personal goals in the system through the search interface using filters such as category, status, etc or in the list of personal goals. Also he can add a sub-goal if he wants to. Personal goals have an expiration date, subgoals or not, and category.

The system also notifies the user with reminders. Tracking personal goals depend on the information that the customer enters or personal goals update. The system provides a method of notification via email to remind the user when to update the information of the goals, when they have expired or accomplish.

Finally, the user as they use the application and accomplishing and updating their goals, they can access a Dashboard where they can view a report about the progress of the goals or a particular goal.
